SRIVIN PLATFORMS

Delivery partner to RacingAhead / SportSeek

SportSeek — Unified Sports Ecosystem Platform

Gap & Decision Register

SportSeek vision, SOW and Srivin architecture: conflicts, gaps, decisions required and industry best practices

Document control	
Document	SRV-SPS-2A-GDR-004
Programme	SportSeek Phase 2 — Phase 2A (Harden & Unify)
Client	RacingAhead / SportSeek, Hyderabad
Prepared by	Srivin Platforms — Technical Programme Management Office
Version / date	v1.0 — 15 October 2026
Status	Issued for SportSeek steering review
Reference baseline	SOW v1.0; High Level Requirements; SportSeek vision boards (15 Oct 2026); Srivin pack v2.1
Classification	Confidential — RacingAhead / SportSeek and Srivin Platforms only

Contents

1. Purpose, sources and method

2. Executive summary

3. How to read this register

4. Conflict register: vision vs SOW

5. Architecture gap register

6. Decision register

7. Vision-to-architecture traceability

8. Launch-week actions (15–20 October 2026)

9. Industry best practices and standards

10. Register governance and next steps

1. Purpose, sources and method

This register records where SportSeek's product vision, the Phase 2 SOW and Srivin's Phase 2A architecture do not line up. It also records the decisions needed to close each gap and the industry practices the platform should follow. It is a working tool for the SportSeek steering committee: every item has an owner, a need-by date and a recommended resolution.

Ref.	Source	Version / scope
S1	SportSeek Phase 2 Statement of Work	v1.0, 15 Jul 2026 (incl. Figure 1 architecture and §11 persona journeys)
S2	SportsSeek App — High Level Requirements	4 pages, undated
S3	SportSeek vision boards (DOC-20261015-WA0129)	10 boards received 15 Oct 2026: ecosystem, 5-platform architecture, unified platform vision, end-user, community member, facility, academy & club, seller & brand, coach & expert, creator journeys
S4	Srivin Phase 2A delivery pack	v2.1: WBS & Integrated Project Plan, Delivery Model, Technical Approach

Method

1. Read all four sources, including the SOW figures (Figure 1 architecture and §11 persona journeys) and all ten vision boards.
2. List every capability, principle and data element the vision shows, and map each to the SOW scope and to the Srivin architecture (Section 7).
3. Classify each mismatch: a **Conflict** (two SportSeek documents disagree, so SportSeek must choose) or a **Gap** (the Srivin architecture does not yet provide what the vision or SOW needs).
4. Assign severity, a recommended resolution, an owner and a need-by date tied to the release plan.

> **Scope note**
>
> Regulatory points (RBI, DPDP, tax, consumer protection, intermediary rules) are flagged because they shape the architecture. They are not legal or tax advice, and each needs confirmation by SportSeek's advisers.

2. Executive summary

The Srivin architecture is a sound foundation for the SportSeek vision. Its layers (experience → shared services → business domains → data) and its domain boundaries match the vision's own architecture board. The review found **4 conflicts** between SportSeek's vision and the SOW, and **15 gaps** in the Srivin architecture. **23 decisions** are logged.

Severity	Conflicts + gaps	Meaning
Critical	2	Regulatory or launch risk; decide immediately
High	6	Costly rework if not decided before the next design milestone
Medium	8	Needs a decision before the phase that uses it
Low	3	Backlog or scope-tagging decision

Decisions needed in the next two weeks

DEC-04 — Under-18 users at launch (17 Oct). The vision shows athletes aged 14–17. Shared Identity goes live on 20 Oct. SportSeek needs a legal view on DPDP parental consent before launch, even if the answer is an interim age gate.

DEC-05, DEC-11, DEC-14, DEC-17, DEC-18, DEC-21 — HLD principles (23 Oct): organisation model, cache/storage/search, separate rewards ledger, event capture from R2, partner API, international-ready data.

DEC-01 and DEC-03 — SSO/super-app and community timing (30 Oct): the vision roadmap promises both; the SOW does not.

DEC-02 — Wallet (13 Nov): the vision shows a stored balance and partner "Withdraw"; the SOW forbids holding funds. This is a regulatory decision, and marketing should stop showing a wallet until it is made.

DEC-12 — Order line items and fee engine (13 Nov): needed before refunds (F5) are built.

3. How to read this register

Field	Meaning
ID	**C-n** conflict between SportSeek documents; **G-n** gap in Srivin architecture; **DEC-n** decision. Every C and G links to one DEC.
Severity	Critical, High, Medium or Low (Section 2).
Need-by	Latest date the decision can be taken without moving a release or forcing rework. Derived from the WBS & Integrated Project Plan v2.1.
Owner	The person or function who decides. Srivin recommends; SportSeek decides unless the item is a Srivin design choice.
Status	**Open** → **Decided** (with date and outcome) → **Closed** (reflected in design and plan). **Tracked** means already in the WBS dependency register.

4. Conflict register: vision vs SOW

Each conflict is a place where two SportSeek documents disagree. Srivin cannot resolve these alone; each needs a SportSeek decision.

C1 — Single sign-on and in-app role switching [High]

Aspect	Detail
Vision says	"One Login (SSO)" across all apps; a single "Super App" with a "Switch Role" screen (Player, Coach, Tournament Organiser, Venue Partner) (S3 boards 2–3)
SOW says	SSO out of scope (§4). Two apps with separate logins; a person switches context by logging into the other app (§7). Figure 1: "two apps, one shared identity (no SSO)".
Impact	Determines app structure (one super-app vs User App + Partner App) and identity session design. Shared Identity (F3) goes live on 20 Oct on the SOW model.
Options	A) Keep SOW model for Phase 2 (no SSO, two apps). B) Add SSO across apps later (identity is OIDC-based, so this is mainly session configuration). C) Move to one super-app with in-app role switching (app restructure; change request).
Srivin recommendation	**A for Phase 2, with B kept open: F3 already uses one OIDC identity service, so SSO can be enabled later without rework. Treat C as a Stage-2 product decision with its own change request.**
Decision	DEC-01

C2 — Wallet with stored balance and partner "Withdraw" [Critical]

Aspect	Detail
Vision says	"One Wallet … All transactions. One Balance" with a user balance (₹5,250); coaches and sellers see "Available Balance" with a "Withdraw" button (S3 boards 3, 8, 9)
SOW says	No stored-value wallet, credits or float (§4). Transaction Ledger is read-only; funds route directly to partners via Razorpay Route so SportSeek never holds funds (§8.3).
Impact	Regulatory, not only functional: a balance usable to pay third-party partners is likely to fall under RBI prepaid payment instrument (PPI) rules; holding partner earnings for on-demand withdrawal risks the Payment Aggregator licensing the SOW is designed to avoid.
Options	A) Keep SOW model: Ledger view + Route settlements; show partners "earnings & settlement status", not a withdrawable balance. B) Wallet/balance through a licensed PPI issuer or bank partner (separate programme). C) Closed-loop reward points only (not money; see DEC-14).
Srivin recommendation	**A for Phase 2. Align vision artwork and marketing copy now. Any wallet (B) only after SportSeek legal/regulatory sign-off, as a separate change request.**
Decision	DEC-02

C3 — Timing of Community and Analytics [High]

Aspect	Detail
Vision says	Phase 2 (0–6 months): Unified Identity & SSO, One Wallet, Role Management, Unified Notifications, Enhanced Partner App, Core Analytics, Community Module (S3 board 3)
SOW says	Community and basic Analytics are Phase 2B, after the 2A "harden & unify" scope (§3.2, §12.1 M7–M8)
Impact	Expectation gap: Srivin plan completes 2A on 23 Mar 2027 with no community or analytics features. Stakeholders reading the vision roadmap may expect them by then.
Options	A) Keep SOW sequence; start 2B (Community + Expert Booking + basic analytics) on the same monthly train from Apr 2027. B) Pull a thin community slice (groups + feed + reviews) into 2A by swapping with a later 2A feature. C) Run a second pod in parallel from Jan 2027 (cost).
Srivin recommendation	**A, plus start event capture for analytics from R2 (G9) so dashboards are fast to deliver in 2B. Confirm the published roadmap with SportSeek stakeholders.**
Decision	DEC-03

C4 — Marketplace model (resolves SOW open item) [Medium]

Aspect	Detail
Vision says	Third-party sellers and brands: onboarding, catalogue, orders, shipping, returns, payouts, promotions (S3 board 8)
SOW says	Open item ⚑: "Is RA only showing data of the users or is it building a marketplace?" Build vs headless-commerce decision pending (§3.3)
Impact	The vision confirms a multi-seller marketplace. This brings e-commerce obligations (seller disclosures, returns, grievance handling) and marketplace tax treatment into scope for 2C.
Options	A) Custom build on the SportSeek platform. B) Headless commerce platform integrated via APIs. C) Partner marketplace integration.
Srivin recommendation	**Decide before 2C planning; Srivin to provide a build-vs-buy assessment in Q1 2027. No 2A impact.**
Decision	DEC-09

5. Architecture gap register

Gaps in the Srivin Phase 2A architecture (Technical Approach v2.1) against the vision and the SOW, sorted by severity.

ID	Gap	Sev.	Evidence (source)	Impact	Recommended resolution	When	Owner	DEC
G3	**Minors, guardians and children's data not modelled**	Critical	U14/U15 athletes aged 14–17 (S3 boards 7, 9), school sports, academy "parent access" (S1 §11.5), with performance tracking, AI recommendations and ads in the vision	Under the DPDP Act, 2023, processing a child's (under-18) personal data needs verifiable parental consent, and tracking, behavioural monitoring and targeted advertising directed at children are restricted. Identity goes live 20 Oct.	Legal view before launch on whether under-18s may register on 20 Oct (interim age gate if needed). Then: date of birth / age capture, guardian linkage and consent records, exclusion of minors from targeted ads and profiling, guardian-managed accounts for academies.	Decision: 17 Oct (pre-launch). Build: R2.	SportSeek Legal / PO	DEC-04
G1	**Cache, object/media storage and search index missing from Srivin architecture**	High	SOW Figure 1 shows Redis cache, object storage (media, docs) and a search index (future); vision shows "Content Storage", "Cache Layer", "Global Search" (S1, S3 board 2). Srivin TAD diagram shows only PostgreSQL and the analytics stream.	Images, documents and KYC files have no designed home; global search across people, venues and events has no path; performance headroom for search and availability is reduced.	Add Redis (cache, rate limits, OTP throttling), object storage + CDN (images, documents; signed URLs; restricted bucket for KYC), and a search ADR: PostgreSQL full-text/geo now, a dedicated search engine when global search ships.	Design: HLD (23 Oct). Build: R2–R3.	Srivin Architect	DEC-11
G2	**No Organisation (business account) model in identity**	High	Academies/clubs with coaches, staff and members; facilities with "staff & access management" and multiple venues; brands with teams (S3 boards 6–8)	F3 models roles per person only. Without an Organisation entity, staff logins, multi-venue businesses and academy ERP (2C) force identity rework.	Add Organisation, Membership and organisation-scoped roles (owner, manager, staff, coach) as an additive extension of the F3 identity schema. Partner services belong to an Organisation, not only a person.	Design: HLD (23 Oct). Build: R2 (additive; no change to R1).	Srivin Architect / SportSeek PO	DEC-05
G4	**No pricing, fee and commission engine**	High	Commission bands (bookings 5–20%, marketplace 10–30%), per-session expert commission, coupons, packages, "boost visibility" (S3 board 2, 6, 8)	Route split settlement, GST on SportSeek fees and the Ledger all need correct line items. Without an order/line-item model, F5 refunds, F9 Ledger and F11 payouts will compute amounts inconsistently.	Introduce an order model with line items (price, discount, platform fee, taxes, partner share) and configurable fee rules per partner type/category; this drives Route splits, refunds and invoicing.	Design: by 13 Nov (before F5 build). Build: R3–R6.	Srivin Architect / SportSeek Finance	DEC-12
G9	**Data for analytics and AI not captured until 2B**	High	Vision: Data Lake, Event Stream, Real-time Analytics, AI recommendations at 6–12 months (S3 board 2–3); SOW: AI needs 6–12 months of production data first (§3.3)	If capture starts in 2B, the data needed for AI will not exist when 2C starts.	From R2, stream domain events (with a documented, versioned event taxonomy and consent flags) to low-cost raw storage; build dashboards in 2B on top.	Design: HLD (23 Oct). Build: R2.	Srivin Architect / SportSeek PO	DEC-17
G5	**No recurring payments / subscriptions**	Medium	"Go Premium", monthly coaching programmes, facility memberships, seller plans, fan subscriptions (S3 boards 4, 6, 9, 10)	Subscription revenue streams have no payment path; retrofitting mandates and renewals into the payments area later is costly.	Reserve a Subscriptions capability in the payments area (gateway subscriptions / UPI AutoPay / e-mandate), with ledger events for renewals and failures.	Design: 2B planning. Build: 2B/2C.	Srivin Architect	DEC-13
G6	**Rewards and points need their own ledger**	Medium	Points, XP, levels, badges, "Redeem points" for turf discounts and merchandise (S3 boards 5, 10)	Mixing points with the Transaction Ledger blurs financial reporting and the no-stored-value position (C2).	Separate double-entry Rewards ledger with expiry and redemption rules; redemptions appear in orders as discount line items (G4). Not money and not withdrawable.	Principle in HLD (23 Oct). Build: 2C.	Srivin Architect	DEC-14
G7	**No real-time channel**	Medium	Live scores and match updates (S2 "real-time match engine"; S3), chat and messaging, live comments	Polling does not scale for live tournaments or chat; adding real-time later touches mobile, web and back end.	ADR for a real-time layer (SignalR within the .NET estate, or a managed real-time service), with fan-out sized for tournament peaks.	ADR: by 26 Feb 2027. Build: 2B.	Srivin Architect	DEC-15
G10	**No public / partner API and integration strategy**	Medium	"Open API Layer: connects partners, devices & third parties"; IoT-ready facility management; wearables (S3 board 4; S2 add-ons)	Integrations get built ad hoc through internal APIs, which become hard to change.	Separate partner API surface at the gateway: OAuth client credentials, API keys per partner, rate limits, versioning, outbound webhooks with signing.	Principle in HLD (23 Oct). Build: when first external integration is prioritised.	Srivin Architect	DEC-18

ID	Gap	Sev.	Evidence (source)	Impact	Recommended resolution	When	Owner	DEC
G11	**Partner-facing dashboards need multi-tenant analytics**	Medium	Facility, coach, academy and seller dashboards with revenue, utilisation, demographics, forecasts, downloadable reports (S3 boards 6–9)	"Buy a BI tool" (SOW §6.1) covers internal reporting; dashboards inside partner apps need per-partner row-level security and embedding.	Choose an analytics tool that supports secure embedding and row-level security, or build partner dashboards from pre-aggregated tables.	Decision: 2B planning (26 Feb 2027).	SportSeek PO / Srivin Architect	DEC-19
G12	**No trust & safety or dispute capability**	Medium	Verified profiles, content moderation, report & block, code of conduct, dispute resolution (S3 boards 5, 8)	User-generated content and marketplace disputes carry legal duties (grievance handling under the IT Intermediary Rules and Consumer Protection (E-Commerce) Rules).	Moderation and disputes area: report queue, automated + human moderation, appeal flow, grievance officer workflow, audit trail.	Before Community (2B) and Marketplace (2C).	SportSeek Legal / PO	DEC-20
G13	**International readiness basics**	Medium	Phase 4: international payments, global tournaments, new sports (S3 board 3)	International support is out of SOW scope (§4), but money without currency codes and local timestamps are very costly to retrofit.	Store ISO 4217 currency with every amount, timestamps in UTC with venue time zone, translatable strings, locale-aware formatting. No multi-currency features in Phase 2.	Principle in HLD (23 Oct); applied from R2.	Srivin Architect	DEC-21
G8	**No in-app notification inbox**	Low	Vision Notification Engine lists "In-App" alongside Email, SMS, Push (S3 board 2)	Users cannot review past alerts; push-only delivery is lossy.	Add a notification centre (stored notifications, read/unread, deep links) to F4.	R2 (F4 scope).	SportSeek PO	DEC-16
G14	**Media and streaming platform**	Low	Live streaming, highlights, reels, creator content, copyright protection, ads (S3 boards 1, 10)	Out of SOW scope (§4) but central to the vision's 5th platform.	Reserve a Media area boundary; use a managed video service (upload, transcode, CDN, DRM) when scoped. Images and short media use G1 storage meanwhile.	Scope decision: Phase 3 planning.	SportSeek Sponsor	DEC-22
G15	**Smaller vision items not in any plan**	Low	Calendar sync (S2, S3 board 6), video sessions with experts (S2, S3 board 9), shipping & returns (S2, S3 board 8), referral and affiliate tracking (S3 boards 6, 10), guest browsing (S3 board 4)	Each is small, but together they shape stakeholder expectations.	Log as backlog epics with phase tags; guest browsing and calendar export can ride an early 2B train.	2B scoping.	SportSeek PO	DEC-23

6. Decision register

All decisions, sorted by need-by date. Status as at 15 October 2026.

ID	Decision required	Srivin recommendation	Owner	Need-by	If late	Status
DEC-04	**Under-18 users at launch and children's data (G3)**	Legal view now; interim age gate if needed; guardian consent model in R2	SportSeek Legal / PO	17 Oct 2026	Launch with unmanaged children's-data risk	Open — urgent
DEC-05	**Organisation model in identity (G2)**	Approve Organisation / Membership / org roles as additive R2 extension	SportSeek PO (approve); Srivin Architect	23 Oct 2026	Staff and multi-venue partners unsupported; rework later	Open
DEC-07	**Cloud provider (vision states "AWS / GCP")**	Confirm the current Phase 1 cloud as the target; no migration in Phase 2	SportSeek Tech	23 Oct 2026	IaC and managed-service choices on hold	Open
DEC-11	**Cache, storage and search (G1)**	Redis + object storage/CDN now; PostgreSQL search now, search engine later	Srivin Architect (ADR); SportSeek Tech approve	23 Oct 2026	Media and search built ad hoc	Open
DEC-14	**Rewards as a separate points ledger (G6)**	Approve principle: points are not money, separate ledger	SportSeek Sponsor / Finance	23 Oct 2026	Risk of points mixing with financial ledger	Open
DEC-17	**Event capture for analytics from R2 (G9)**	Approve raw event capture from R2 with consent flags	SportSeek PO	23 Oct 2026	No data for AI when 2C starts	Open
DEC-18	**Partner / public API principles (G10)**	Separate partner API surface; principles in HLD	Srivin Architect	23 Oct 2026	Ad hoc integrations	Open
DEC-21	**International-ready data conventions (G13)**	Currency codes, UTC + venue time zone, translatable strings	Srivin Architect	23 Oct 2026	Costly retrofit	Open
DEC-01	**SSO and in-app role switching (C1)**	Keep two apps with separate logins in Phase 2; SSO-ready identity; super-app as a Stage-2 change request	SportSeek Sponsor / PO	30 Oct 2026	R2 app design proceeds on two-app model by default	Open
DEC-03	**Community and Analytics timing (C3)**	Keep SOW sequence; 2B starts Apr 2027 on the same train; event capture from R2	SportSeek Sponsor	30 Oct 2026	Stakeholder expectation risk persists	Open
DEC-06	**Scale targets for NFRs (existing D20)**	Provide 12- and 24-month targets: users, partners, peak concurrency, bookings/day, p95 latency, uptime	SportSeek Sponsor	30 Oct 2026	Capacity design rests on assumptions	Open
DEC-16	**In-app notification inbox in F4 (G8)**	Add to R2 scope	SportSeek PO	30 Oct 2026	Ships without inbox; added later	Open
DEC-02	**Wallet / stored balance / partner withdraw (C2)**	No stored balance in Phase 2; partners see earnings and settlement status; any wallet only after legal sign-off via a licensed issuer	SportSeek Sponsor / Legal	13 Nov 2026	F9/F11 designed on SOW model; marketing may keep promising a wallet	Open
DEC-12	**Order line items and fee engine (G4)**	Adopt order/line-item model and fee rules before F5	SportSeek Finance / PO	13 Nov 2026	Refund, ledger and payout amounts inconsistent	Open
DEC-08	**Marketplace tax treatment (TDS s.194-O, GST TCS s.52)**	Tax adviser opinion on SportSeek as an e-commerce operator for services and goods	SportSeek Finance	08 Jan 2027	Ledger and payout calculations may be wrong at F9/F11	Open
DEC-13	**Subscriptions capability (G5)**	Reserve in payments area; build in 2B/2C	SportSeek PO	26 Feb 2027	Subscription revenue delayed	Open
DEC-15	**Real-time technology (G7)**	ADR: SignalR or managed real-time service	Srivin Architect	26 Feb 2027	2B live scores/chat delayed	Open
DEC-19	**Embedded partner analytics approach (G11)**	Tool with embedding + row-level security, or pre-aggregated tables	SportSeek PO	26 Feb 2027	Partner dashboards rebuilt later	Open
DEC-20	**Trust & safety and grievance model (G12)**	Moderation/disputes area and grievance officer workflow before 2B	SportSeek Legal	26 Feb 2027	Community cannot launch compliantly	Open
DEC-23	**Backlog placement of smaller items (G15)**	Tag into 2B/2C backlog	SportSeek PO	26 Feb 2027	Expectation drift	Open
DEC-09	**Marketplace build vs headless commerce (C4)**	Srivin build-vs-buy assessment in Q1 2027	SportSeek Sponsor	31 Mar 2027	Delays 2C marketplace start	Open
DEC-22	**Media / streaming scope (G14)**	Phase 3 scoping; managed video service	SportSeek Sponsor	31 Mar 2027	Vision platform 5 unplanned	Open
DEC-10	**Pending SOW items already in plan (D10, D11, D15, D16)**	Route enablement, refund policy, ledger visibility, warranty SLAs — tracked in WBS §10.3	SportSeek	per WBS	Per WBS dependency register	Tracked

7. Vision-to-architecture traceability

Every capability shown on the vision boards, mapped to the Srivin architecture and SOW phase. **Covered** = in the plan; **Partial** = in the plan with a gap; **Planned** = later SOW phase; **Gap / Conflict / Out of scope** = see the linked register item.

Vision area	Capability (vision boards)	Architecture component / phase	Status	Register items
Foundation	Unified identity: single login, profile, roles & permissions	Identity domain — F3 (R1); org model G2	Partial	C1, G2, G3
Foundation	Payments & wallet: subscriptions, payouts & settlements	Transaction Ledger F9, Route payouts F11	Partial	C2, G4, G5
Foundation	Community graph: connections, followers, groups	Community domain (2B)	Planned 2B	C3
Foundation	Notification engine: in-app, email, SMS, push	Notification domain — F1, F2, F4, F12	Partial	G8
Foundation	Analytics & data layer; event stream; data lake	Outbox → broker; analytics 2B	Partial	G9, G11
Foundation	Search & discovery: global search, smart filters	Venue search (Phase 1); search ADR	Gap	G1
Foundation	AI & personalisation	Phase 2C+ per SOW	Planned 2C	G9
Foundation	Security & privacy	Security & DPDP controls (TAD §7)	Partial	G3
Foundation	Open API layer for partners and devices	—	Gap	G10
Shared data	User DB, Transaction DB	PostgreSQL, schema per domain	Covered	—
Shared data	Cache layer; content storage	Not in Srivin diagram (in SOW Figure 1)	Gap	G1
Commerce	Facility & slot booking, cancellations, waitlist	Phase 1 + F5, F8	Covered	—
Commerce	Marketplace (gear, nutrition)	Phase 2C	Planned 2C	C4
Commerce	Subscriptions, packages, offers & discounts	—	Gap	G4, G5
Community	Feed, groups, messaging, profiles, polls	Phase 2B	Planned 2B	C3, G7, G12
Intelligence	Analytics, rankings, performance tracking, AI insights	Phase 2B/2C	Planned 2B/2C	G9, G11
Infrastructure	League & tournament management, scheduling, scoring	Phase 1 + hardening	Covered	—
Infrastructure	Coach & staff management; facility staff & access	F7 partner model + G2	Partial	G2
Infrastructure	Academies & schools ERP, attendance, fees	Phase 2C	Planned 2C	G2, G3, G5
Media	Live streaming, highlights, creator content, ads	Out of SOW scope (§4)	Out of scope	G14
Experience	Super App with role switching	User App + Partner App (SOW)	Conflict	C1
Experience	Partner App, Admin Portal, Web platform	Phase 1 apps; Web F6, F10	Covered	—
Experience	Stage 2–3 dedicated apps	BFF per client; shared design system	Covered (design)	—

8. Launch-week actions (15–20 October 2026)

Release R1 code froze on 14 October and goes live on 20 October with Shared Identity (F3). None of the actions below changes the frozen build. They protect the launch and keep R2 design options open.

#	Action	Owner	By	Links
1	Legal view on whether under-18s may register at launch; if not cleared, apply an interim age gate in registration copy and terms	SportSeek Legal / PO	17 Oct	DEC-04, G3
2	Confirm the F3 identity schema can take Organisation/Membership and guardian links as additive tables in R2, with no change to R1 data	Srivin Architect	17 Oct	G2, G3
3	Brief marketing and stakeholders: R1 delivers shared identity with separate app logins, not SSO, and no wallet	SportSeek PO / Srivin Delivery Lead	19 Oct	C1, C2
4	Add CERT-In incident-reporting steps and log-retention settings to the launch runbook	Srivin DevOps / SportSeek Ops	19 Oct	Section 9
5	Table this register at the first post-launch steering meeting; assign owners to every Open item	Srivin Delivery Lead	23 Oct	All

9. Industry best practices and standards

The practices below are the industry standards Srivin recommends SportSeek adopt across the platform, with how each applies to SportSeek and where it stands today. **Adopted** = already in the Srivin plan; **Partial** = in the plan with a gap; **Planned** = to be added in the HLD or a later release; **Gap** = not yet planned and linked to a register item. Regulatory references need confirmation by SportSeek's advisers.

Area	Practice	Standard / reference	How it applies to SportSeek	Status	Link
Architecture	**Bounded contexts and a modular monolith with enforced boundaries; extract services only on evidence**	Domain-Driven Design; SOW §6	One module per domain, schema per domain, architecture tests in CI	Adopted	TAD §5
Architecture	**Architecture documented as code with decision records**	C4 model; Architecture Decision Records (ADRs)	C4 context/container views kept in repo; ADR for every significant choice (DEC-11, 15, 18…)	Adopted	TAD §11–12
Architecture	**Cloud workloads reviewed against the provider's well-architected pillars**	AWS Well-Architected / Google Cloud Architecture Framework	Review at HLD and before R6 (security, reliability, cost, performance, operations)	Planned	DEC-07
Architecture	**Twelve-factor application practices**	The Twelve-Factor App	Config in environment, stateless processes, disposability, dev/prod parity	Adopted	TAD §8
APIs	**Contract-first APIs with a published specification**	OpenAPI 3.x	OpenAPI per module; Postman collections generated (SOW §13); contract tests in CI	Adopted	TAD §8
APIs	**Standard error format and safe retries**	RFC 9457 Problem Details; idempotency keys	One error envelope across APIs; idempotency keys on payment, refund and booking commands	Adopted (errors: Planned)	TAD §6.4
APIs	**API security baseline**	OWASP API Security Top 10	Object-level authorisation checks, rate limits, input validation, inventory of endpoints	Planned	TAD §7.1
Identity	**Standards-based authentication for public clients**	OAuth 2.0 + OpenID Connect; PKCE (RFC 7636); OAuth 2.0 Security BCP (RFC 9700)	OIDC client per app, PKCE on mobile/web, short-lived tokens, refresh-token rotation	Adopted	F3
Identity	**Authenticator and recovery assurance**	NIST SP 800-63B	OTP throttling, lockout, secure recovery, step-up for payouts and KYC changes	Partial	G3, F3
Identity	**Organisation-scoped access control**	RBAC / attribute-based policies	Org membership roles for academies, facilities, brands	Gap	G2
Security	**Application security verification standard**	OWASP ASVS (web/API); OWASP MASVS (mobile)	ASVS Level 2 target for identity, payments and admin; MASVS for both apps	Adopted	TAD §7.1
Security	**Secure software supply chain**	SBOM (CycloneDX or SPDX); SLSA build provenance	SBOM per build, dependency scanning, signed artefacts	Planned	—
Security	**Information security management**	ISO/IEC 27001	Policies, access reviews, supplier controls aligned to 27001; certification is SportSeek's choice	Planned	—
Security	**Cyber-incident reporting and log retention in India**	CERT-In Directions (April 2022)	Incident reporting within the mandated window; system logs retained as required; synchronised clocks	Gap	add to runbook
Payments	**Card-data scope minimisation**	PCI DSS v4.0	Gateway-hosted checkout and tokenisation; no card or UPI credentials stored	Adopted	TAD §6.5
Payments	**Regulated money flows**	RBI Payment Aggregator and PPI frameworks	Route split settlement; no stored balance (C2)	Adopted	C2, DEC-02
Payments	**Correct financial records**	Double-entry bookkeeping; daily reconciliation	Order line items (G4); reconciliation vs gateway; separate rewards ledger (G6)	Partial	G4, G6
Privacy	**Personal-data protection law**	DPDP Act, 2023 and DPDP Rules	Notice, consent, purpose limitation, rights handling, breach response; children's data controls	Partial	G3
Privacy	**Privacy information management**	ISO/IEC 27701; privacy by design	Data inventory, retention schedule, privacy reviews for new features	Planned	—
Data	**Interoperable, versioned event contracts**	CloudEvents; schema registry; data contracts	Event taxonomy with versioning and consent flags from R2	Planned	G9
Data	**Backup and recovery objectives**	Defined RPO/RTO; 3-2-1 backups; restore drills	PITR on PostgreSQL; quarterly restore drill; RPO/RTO agreed with SportSeek	Partial	DEC-06

Area	Practice	Standard / reference	How it applies to SportSeek	Status	Link
Reliability	**Service level objectives and error budgets**	Google SRE practices	SLOs for login, booking, payment; error budget guides release pace	Planned	DEC-06
Reliability	**Unified telemetry**	OpenTelemetry	Traces, metrics and logs from .NET services and mobile crash reporting	Adopted	TAD §7.4
Delivery	**Delivery performance measurement**	DORA metrics	Deployment frequency, lead time, change failure rate, time to restore — reported monthly	Adopted	DLM §19
Delivery	**Progressive delivery**	Feature flags; phased store rollouts	Flags per feature; F3 remote switch; staged mobile rollouts	Adopted	DLM §13
Delivery	**Infrastructure as code**	IaC with peer review (e.g. Terraform)	All environments in code; no manual production change	Adopted	TAD §8
Quality	**Accessibility**	WCAG 2.1 AA (2.2 recommended)	Web and app accessibility checks per release	Adopted	TAD §6.6
Quality	**Balanced automated testing**	Test pyramid; contract testing	Unit/API/contract in CI; curated E2E; regression per release	Adopted	DLM §12
AI	**AI risk and management systems**	NIST AI RMF; ISO/IEC 42001	Governs AI-assisted engineering now and AI features later (recommendations, moderation)	Partial	DLM §14
Trust & safety	**Grievance and moderation duties for user content**	IT (Intermediary Guidelines and Digital Media Ethics Code) Rules, 2021	Grievance officer, reporting and takedown workflow before Community	Gap	G12
Marketplace	**E-commerce consumer obligations**	Consumer Protection (E-Commerce) Rules, 2020	Seller disclosures, returns/refund policy, grievance handling before Marketplace	Gap	C4, G12

10. Register governance and next steps

Governance

- **Owner of the register:** Srivin Delivery Lead. **Review:** weekly in the programme status meeting; monthly at the release review / steering committee.
- **Closing an item:** the decision is recorded with date and outcome, and the change is reflected in the Technical Approach (TDD), the WBS and, where needed, a change request under SOW §18.
- **Escalation:** a decision not taken by its need-by date is escalated one level (Delivery Model §10), with the release impact stated.

Next steps

1. Steering review of this register and assignment of owners (by 23 Oct 2026).
2. HLD sign-off incorporates DEC-05, 07, 11, 14, 17, 18 and 21 (23 Oct 2026).
3. Technical Approach (TDD) updated to v2.2 once the HLD decisions are taken, as agreed with SportSeek.
4. WBS and dependency register updated for any decision that changes release scope.
